

Omega Governance — Public Summary

Omega Governance is a set of observational language canvases. It does not prescribe actions, policies, or outcomes. Its purpose is to make visible where meaning, authority, and responsibility shift in language and systems.

What This Is

- A neutral lens for observing systems
- A way to distinguish diagnosis, compression, and consequence in language
- A governance tool for clarity without persuasion

What This Is Not

- Not advice or instruction
- Not a political or moral position
- Not a safety system or enforcement mechanism

How to Use It

Omega can be applied at the start of a conversation, during analysis, or as an end-of-conversation audit. It can be used with humans or AI systems. It governs language behavior, not decisions.

This summary references the canonical document: Omega Governance — Canonical Canvas Compilation v1.0 (LOCKED). All detailed canvases, rules, and amendment policies are defined there verbatim.
